

KILL WEEDS NATURALLY

Combining cutting-edge technology and scientific research with natural ingredients, we present a breakthrough in effective environmentally-friendly weed control.

Contact Organics offers the Safe Series Weed Terminator Herbicides: HomeSafe and LocalSafe. Our Weed Terminators are natural herbicides designed for governments, municipalities, the education sector, landscaping, maintenance contracting, as well as national parks and small and large homes. It is ideal for individuals, small business and the public and private sector who are exploring the use of effective alternative weed control.

By using the latest innovative technology and non-toxic ingredients, this breakthrough patented formula will provide fast, effective weed control that cares for you and the environment.

LocalSafe™
Weed Terminator
+ Soil Conditioner

HomeSafe™
Weed Terminator

The Weed Terminator Difference

- ✓ Visible action within hours
- ✓ Non-toxic
- ✓ No residue left in soil
- ✓ People & pet friendly
- ✓ Glyphosate free
- ✓ Natural ingredients
- ✓ Conditions soils
- ✓ Suitable for all public areas

Contact Organics Soil Conditioner

The Safe Series Soil Conditioner has been designed to be applied in conjunction with the Weed Terminator. It conditions the soil and enhances water uptake and distribution. In addition, it feeds micronutrients and iodine to your soil to promote healthy growth and microbial activity. As such healthier soil microbiology reduces weed growth.

To ensure control of your weed environment do not deviate from the instructions.

Using in open spaces you can be assured LocalSafe is:

- ✓ Non-toxic to humans and pets
- ✓ Fast acting, providing near immediate results
- ✓ Effective on a wide range of weeds
- ✓ Suitable for glyphosate resistant weeds
- ✓ Able to desiccate seeds, disabling seed bank growth and lengthening spray intervals

How does it work?

When combining the active ingredient of acetic acid with Contact Organics' proprietary delivery technology, our Weed Terminators penetrate the plant by breaking down the waxy covering (protective film) of the weed. In order to effectively maintain weed control you must spray unwanted plants and weeds to the point of run-off. This promotes the moisture to escape, effectively desiccating the weed by dehydration to termination. With no residues remaining in the soil, weeds are unable to build resistance.

The Weed Terminators work in a wide variety of environmental situation's, however it is best applied in high UV to young, actively growing plants. When concentrated higher it can eliminate difficult species, including those that have become resistant to certain chemical applications. After treatment, juvenile weeds are eradicated within three to four days, while mature and woody weeds can take up to one week.

DAY 19

Dilution Rates

Weed Terminator is sold in 10L and 20L modules as 2-part packs, each pack consists of equal amounts Weed Terminator Concentrate and Soil Conditioner, best results come from the equal dilution of the two parts.

Input	Juvenile Weeds 1:1:30	Mature Weeds 1:1:20
Weed Terminator Concentrate	35ml	50ml
Soil Conditioner	35ml	50ml
Water	1L	1L

The table below lists the weeds and grasses that can be controlled.

Speak with your Weed Terminator advisor for dilution rates.

Capeweed	Bindii	Serrated Tussock
Fleabane	Flat Weed	Crofton Weed
Fire Weed	Calthrop	Patterson's Curse
Milk Thistle	Dandelion	Farmers Friend
Thistle	Perennial Rye Grass	Stink Weed
Oxalis	Paspalum	Nettle
