For Immediate Release

Contact Organics launches environmentally preferred and safe weed killer

Contact Organics LocalSafe™ Weed Terminator used around playgrounds delivering non-toxic weed management

Contact Organics is pleased to announce that the Australian Pesticides and Veterinary Medicines Authority (APVMA) has approved Contact Organics range of Weed Terminator herbicides.

Contact Organics launches its high performance, environmentally preferred HomeSafe™, LocalSafe™ and FarmSafe™ Weed Terminator products to the Australian market place.

With current media attention and the health concerns about the use of non-sustainable chemical herbicides, parts of the agricultural industry and local government are looking for alternative weed control options.

Contact Organics Managing Director, Dr Frank Glatz said “We are delighted to receive Australian regulatory approval for our range of Weed Terminator products. This independently validates our product offering. We are now in a position to market our high performance, environmentally preferred HomeSafe™,

LocalSafe™ and FarmSafe™ Weed Terminator products to the Australian market place. We are looking forward to working together with our Australian customers towards implementing effective non-toxic weed control in playgrounds, sporting fields, schools and other public amenity areas, in horticulture, viticulture and around the homes and gardens.”

Contact Organics Founding Director and Inventor, William Briggs, stated “In today’s era of toxicity and with the liberal use of herbicides and pesticides, Contact Organics has now confirmed the value of being sustainable in all industries including farming. With our background in human health the need to prevent contamination from chemical pesticide and herbicide became a priority over designing a cure for the many diseases it caused. Our aim is to increase the benefits of our soil and produce grown here in Australia and to spread the benefits of our knowledge contained in our products world-wide.”

About Contact Organics

Contact Organics develops and manufactures proprietary, high performance, non-toxic weed management products. The company markets them under HomeSafe™, LocalSafe™ and FarmSafe™ brands for domestic, commercial, public amenity and agricultural applications. Contact Organics holds a strong patent portfolio and its growth is fuelled by the global trend towards environmentally sustainable weed management and agriculture. Established in Australia in 2014, the company Headquarter is in Melbourne and its Product Development Centre is in Coffs Harbour. Contact Organics USA business is located in Maurice, Iowa. Contact Organics products are manufactured in both Melbourne and Bangkok, Thailand, and distributed through a network of leading regional distributors throughout Australia. The Company is in process of securing regulatory approvals in its key markets and setting up its global distribution channels.
