

Contact Organics Safe Series Weed Terminator Herbicide Kill Weeds Naturally

Cutting-edge technology and scientific research combined with natural ingredients has led to a breakthrough in effective eco friendly weed control. Contact Organics presents HomeSafe Weed Terminator, LocalSafe and FarmSafe Weed Terminator Concentrate.

HomeSafe Weed Terminator is a Ready to Use herbicide that is pre diluted, ready to spray straight out of the pack.

LocalSafe and **FarmSafe** are 2-part packs, each pack consisting of equal amounts Weed Terminator Concentrate and Soil Conditioner, best results come from the equal dilution of the two parts.

The Weed Terminator Concentrate uses acetic acid as the active ingredient and its patented delivery technology assists it in penetrating the plant.

The Soil Conditioner is a proprietary blend of natural oils and surfactants that improve water penetration of the soil. It also contains mineral nutrients, iodine and enhances soil health.

HomeSafe, LocalSafe and FarmSafe Weed Terminators are natural herbicides designed for use in:

- ✓ Parks
- ✓ Verges
- ✓ Gardens
- ✓ Playgrounds
- ✓ School grounds
- ✓ Nurseries
- ✓ Spot spraying in lawns & turf
- ✓ Orchards
- ✓ Vineyards
- ✓ Other row crops
- ✓ Fence lines
- ✓ Bushland
- ✓ Farms
- ✓ Vegetable beds

Ideal for use in most situations requiring weed control. The latest innovative technology and non-toxic ingredients will provide a fast, effective and eco-friendly option.

The Weed Terminator Difference

- ✓ Visible action within hours
- ✓ Non-toxic
- ✓ No Residue left in soil
- ✓ People & pet friendly
- ✓ Glyphosate free
- ✓ Natural ingredients
- ✓ Beneficial to soil health
- ✓ Suitable in all situations requiring weed control

When using Contact Organics Weed Terminators you can be assured:

- ✓ Effective on a wide range of weeds
- ✓ In-line with sustainable farming practices
- ✓ Suitable for glyphosate resistant weeds
- ✓ Able to desiccate seeds, disabling seed bank growth & lengthening spray intervals

How does it work?

In order to effectively maintain weed control you must spray unwanted plants and weeds to the point of run-off. Our Weed Terminators penetrate the plant by breaking down the protective film of the weed. This promotes the moisture to escape, effectively desiccating the weed by dehydration to termination. With no residues remaining in the soil, weeds are unable to build resistance.

The Weed Terminators work in a wide variety of

environmental situations, however it is best applied in high UV to young, actively growing plants. When concentrated higher it can eliminate difficult species, including those that have become resistant to certain chemical applications.

Cleaning of Equipment

Weed Terminator's active ingredient is Acetic Acid and is corrosive by nature. Ensure a thorough clean out of equipment after use. Leaving spray mixture overnight will likely corrode seals and pumps. If there is a useable volume of spray mixture left, it is strongly recommended to decant the remaining spray mixture into a plastic vessel until required. Discard after 48 hours if not used as product may lose efficacy.

Follow the below instructions to ensure longevity of seals and pumps.

- It is imperative to clean and rinse thoroughly to maintain seal and solenoid life
- Thoroughly rinse spray tank until there is no longer a build-up of foam
- Once you have eliminated foam build up, flush lines with the clean water
- Empty and repeat
- Leave clean flushing water in lines as a further defence against corrosion of equipment

Dilution Rates for Weed Terminator & Soil Conditioner		
Product	Juvenile Weeds	Mature Weeds
Weed Terminator Concentrate	35ml	50ml
Soil Conditioner	35ml	50ml
Water	1L	1L
