

FarmSafe™

Weed Terminator + Soil Conditioner

Contact Organics range of Weed Terminators combines cutting-edge technology and scientific research with natural ingredients to give you a breakthrough in effective environmentally-friendly weed control.

Contact Organics offers the Weed Terminator. Our FarmSafe Weed Terminator is naturally based herbicide designed for vineyards, orchards and other agricultural operations. By using the latest innovative technology and non-toxic ingredients, this breakthrough patented formula will provide fast, effective weed control that cares for you, your soil and the environment.

The Weed Terminator Difference

- ✓ Visible action within hours
- ✓ Non-toxic
- ✓ No residue left in soil
- ✓ Fast & long lasting
- ✓ People, animal and environmentally friendly
- ✓ Glyphosate free
- ✓ Naturally based ingredients
- ✓ Kills weeds & grasses
- ✓ Conditions soils
- ✓ Suitable for many agricultural

Soil Conditioner

Contact Organics Soil Conditioner

The FarmSafe Soil Conditioner has been designed to be applied in conjunction with the Weed Terminator. It conditions the soil and enhances water uptake and distribution. In addition, it feeds micronutrients and iodine to your soil to promote healthy growth and microbial activity. As such healthier soil microbiology reduces weed growth.

Using in agriculture you can be assured Weed Terminator is:

- ✓ Beneficial to soil health
- ✓ In-line with sustainable farming practices
- ✓ A residual free herbicide and no withholding period
- ✓ An effective herbicide for vineyards, orchards, paddocks & other horticultural situations
- ✓ Non-toxic to humans, animals and the environment
- ✓ Fast acting, providing near immediate results
- ✓ Effective on a wide range of weeds
- ✓ Suitable for glyphosate resistant weeds
- ✓ Able to desiccate seeds, disabling seed bank growth and lengthening spray intervals

How does it work?

When combining the active ingredient of acetic acid with Contact Organics' proprietary delivery technology, our Weed Terminators penetrate the plant by breaking down the waxy covering (protective film) of the weed. In order to effectively maintain weed control you must spray unwanted plants and weeds to the point of run-off. This promotes the moisture to escape, effectively desiccating the weed by dehydration to termination. With no residues remaining in the soil, weeds are unable to build resistance.

The FarmSafe Weed Terminator works in wide variety of environmental situations, however it is best applied in high UV to young, actively growing plants. When concentrated higher it can eliminate difficult species, including those that have become resistant to certain chemical applications. After treatment, juvenile weeds are eradicated within three to four days, while mature and woody weeds can take up to one week.

See the Weed Terminator and Soil Conditioner Application & Technical information when using in a boom or wand application.

To ensure control of your weed environment do not deviate from the instructions.
